## ABSTRACT

In this paper we generalize the remainder cordial labeling, called $k$-remainder cordial labeling and investigate the 4 -remainder cordial labeling behavior of certain graphs.

## 1 Introduction

Graphs considered here are finite and simple. Graph labeling is used in several areas of science and technology like coding theory, astronomy, circuit design etc. For more details refer Gallian [2]. The origin of graph labeling is graceful labeling which was introduced by Rosa (1967). Let $G_{1}, G_{2}$ respectively be $\left(p_{1}, q_{1}\right),\left(p_{2}, q_{2}\right)$ graphs. The corona of $G_{1}$ with $G_{2}, G_{1} \odot G_{2}$ is the graph obtained by taking one copy of $G_{1}$ and $p_{1}$ copies of $G_{2}$ and joining the $i^{t h}$ vertex of $G_{1}$ with an edge to every vertex in the $i^{\text {th }}$ copy of $G_{2}$. The

[^0][^1]bistar $B_{m, n}$ is the graph obtained by making adjacent the two central vertices of $K_{1, m}$ and $K_{1, n}$. A graph $S(G)$ derived from a graph $G$ by a sequence of edge subdivisions is called a subdivision of a graph $G$. Cahit[1], introduced the concept of cordial labeling of graphs. Recently Ponraj et al. [4], introduced the remainder labeling of graphs and investigated the remainder cordial labeling behavior of several graphs like path, cycle, complete graph, star, bistar etc. Motivated by these concepts, in this paper we generalize the remainder cordial labeling, called $k$-remainder cordial labeling and investigate the 4 remainder cordial labeling behavior of certain graphs. Terms are not defined here follows from Harary [3] and Gallian [2].

## $2 k$-Remainder cordial labeling

Definition 1. Let $G$ be a $(p, q)$ graph. Let $f$ be a map from $V(G)$ to the set $\{1,2, \ldots, k\}$ where $k$ is an integer $2<k \leq|V(G)|$. For each edge $u v$ assign the label $r$ where $r$ is the remainder when $f(u)$ is divided by $f(v)$ (or) $f(v)$ is divided by $f(u)$ according as $f(u) \geq f(v)$ or $f(v) \geq f(u)$. $f$ is called a $k$-remainder cordial labeling of $G$ if $\left|v_{f}(i)-v_{f}(j)\right| \leq 1, i, j \in\{1, \ldots, k\}$ where $v_{f}(x)$ denote the number of vertices labelled with $x$ and $\left|e_{f}(0)-e_{f}(1)\right| \leq 1$ where $e_{f}(0)$ and $e_{f}(1)$ respectively denote the number of edges labeled with even integers and number of edges labelled with odd integers. A graph with a $k$-remainder cordial labeling is called a $k$-remainder cordial graph.

Remark 2. When $k=2$, number of edges with label 0 is $q$. So there does not exists $a$ 2 -remainder cordial labeling.

Theorem 3. Every graph is a subgraph of a connected $k$-remainder cordial graphs for $k \geq 4$.

Proof. Let $G$ be a $(p, q)$ graph. Consider the $k$-copies of the complete graph $K_{p}$. Let $G_{i}$ denotes the $i^{\text {th }}$ copy of $K_{p}$ and $V\left(G_{i}\right)=\left\{u_{j}^{i}: 1 \leq j \leq p\right\}$. Let $s=\binom{p}{2}-1$. Next consider the $s$ copies of the path on $k$ vertices and denotes $i^{t h}$ copy as $P_{k}^{i}: v_{1}^{i} v_{2}^{i} \ldots v_{k}^{i}$ $(1 \leq i \leq s)$. We now construct the super graph $G^{*}$ of the graph $G$ as given below; Let $V\left(G^{*}\right)=\bigcup_{i=1}^{k} V\left(G_{i}\right) \cup \bigcup_{i=1}^{s} V\left(P_{k}^{i}\right)$ and $E\left(G^{*}\right)=\bigcup_{i=1}^{k} E\left(G_{i}\right) \cup \bigcup_{i=1}^{s} E\left(P_{k}^{i}\right) \cup\left\{u_{1}^{i} v_{1}^{i+1}: 1 \leq i \leq\right.$ $k-1\} \cup\left\{u_{2}^{2} v_{3}^{1}\right\} \cup\left\{v_{2}^{i} v_{3}^{i+1}: 1 \leq i \leq s-1\right\} \cup\left\{v_{3}^{i} v_{2}^{i+1}: 1 \leq i \leq s-1\right\} \cup\left\{v_{3}^{i} v_{4}^{i+1}: 1 \leq\right.$ $i \leq s-1\} \cup\left\{u_{2}^{2} u_{2}^{3}, u_{3}^{2} u_{3}^{3}, u_{4}^{2} u_{4}^{3}\right\} \cup\left\{u_{2}^{3} u_{2}^{4}, u_{3}^{3} u_{3}^{4}\right\}$. Clearly $G^{*}$ has $k p+k\binom{p}{2}-k$ vertices and $2(k+1)\binom{p}{2}$ edges. Let $f$ be this vertex labeling. We now check the vertex and edge condition of the remainder cordiality. $v_{f}(1)=v_{f}(2)=\ldots=v_{f}(k)=p+s$ and $e_{f}(0)=k\binom{p}{2}+s+1, e_{f}(1)=k-2+1+5+(k-2) s+s-1+s-1+s-1=k\binom{p}{2}+s+1$. Hence $f$ is a $k$-remainder cordial labeling of $G^{*}$.

We now investigate the 4 -remainder cordial labeling behaviors of some graphs.
Theorem 4. The complete graph $K_{n}$ is 4 -remainder cordial iff $n \leq 3$.
Proof. Suppose $f$ is a 4-remainder cordial labeling of $K_{n}$. The proof is divided into four cases.
Case(i). $n>3$
Subcase(i). $n \equiv 0(\bmod 4)$
Let $n=4 t$. Then $v_{f}(1)=v_{f}(2)=v_{f}(3)=v_{f}(4)=t$
and we find also $e_{f}(0)=t^{2}+t^{2}+t^{2}+\binom{t}{2}+t^{2}+\binom{t}{2}+\binom{t}{2}+\binom{t}{2}$
$=4 t^{2}+4\binom{t}{2}$.
and $e_{f}(1)=t^{2}+t^{2}=2 t^{2}$.
Then $e_{f}(0)-e_{f}(1)=4 t^{2}+4\binom{t}{2}-2 t^{2}$
$=2 t^{2}+4\binom{t}{2}$
$=2 t^{2}+\frac{t(t-1)}{2}$
$=2 t^{2}+2 t^{2}-2 t$
$=4 t^{2}-2 t>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$.
which is a contradiction.
Subcase(ii). $n \equiv 1(\bmod 4)$
Let $n=4 t+1$. Then any one of the following four possibilities are occurs.
Type $A: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t, v_{f}(4)=t$.
Type $B: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t$.
Type $C: v_{f}(1)=t, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t$.
Type $D: v_{f}(1)=t, v_{f}(2)=t, v_{f}(3)=t, v_{f}(4)=t+1$.
Type $A: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t, v_{f}(4)=t$.
Then $e_{f}(0)=t(t+1)+t(t+1)+t(t+1)+t^{2}+t^{2}+\binom{t+1}{2}+\binom{t}{2}+\binom{t}{2}+\binom{t}{2}$
$=4 t^{2}+4 t+t^{2}+\frac{(t+1)(t+1)-1}{2}+\frac{t(t-1)}{2}+\frac{t(t-1)}{2}+\frac{t(t-1)}{2}$
$=5 t^{2}+4 t+\frac{\left(t^{2}+t\right)}{2}+3 \frac{\left.t^{2}-t\right)}{2}$
$=7 t^{2}+3 t$.
and $e_{f}(1)=t^{2}+t^{2}=2 t^{2}$.
Then we find $e_{f}(0)-e_{f}(1)=7 t^{2}+3 t-2 t^{2}=5 t^{2}+3 t>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $B: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t$.
Then $e_{f}(0)=t(t+1)+t^{2}+t^{2}+t(t+1)+\binom{t}{2}+\binom{t}{2}+\binom{t}{2}+\binom{t+1}{2}$
$=4 t^{2}+2 t+3 \frac{t(t-1)}{2}+\frac{(t+1)(t+1)-1}{2}$
$=6 t^{2}+t$.
and $e_{f}(1)=t(t+1)+t^{2}=2 t^{2}+t$.
Then we find $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+t\right)-\left(2 t^{2}+t\right)=4 t^{2}>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $C: v_{f}(1)=t, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t$.
Then $e_{f}(0)=t(t+1)+t^{2}+t^{2}+t^{2}+\binom{t}{2}+\binom{t}{2}+\binom{t}{2}+\binom{t+1}{2}$
$=4 t^{2}+t+3 \frac{t(t-1)}{2}+\frac{(t+1)(t+1)-1}{2}=6 t^{2}$.
and $e_{f}(1)=t(t+1)+t(t+1)=2 t^{2}+2 t$.
Then we find $e_{f}(0)-e_{f}(1)=6 t^{2}-\left(2 t^{2}+2 t\right)=4 t^{2}-2 t>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $D: v_{f}(1)=t, v_{f}(2)=t, v_{f}(3)=t, v_{f}(4)=t+1$.
Then $e_{f}(0)=t^{2}+t^{2}+t(t+1)+t(t+1)+\binom{t}{2}+\binom{t}{2}+\binom{t}{2}+\binom{t+1}{2}$
$=4 t^{2}+2 t+3 \frac{t(t-1)}{2}+\frac{(t+1)(t+1)-1}{2}=6 t^{2}+t$.
and $e_{f}(1)=t^{2}+t(t+1)=2 t^{2}+t$.
Then we find $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+t\right)-\left(2 t^{2}+t\right)=4 t^{2}>1$ for any positive integer $t$.
Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.
Subcase(iii). $n \equiv 2(\bmod 4)$
Let $n=4 t+2$. In this case any one of the following arises.
Type $A: v_{f}(1)=t+1, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t$.
Type $B: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t$.
Type $C: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t, v_{f}(4)=t+1$.
Type $D: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t+1, v_{f}(4)=t$.
Type $E: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t+1$.
Type $F: v_{f}(1)=t, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t+1$.
Type $A: v_{f}(1)=t+1, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t$.
Then we find $e_{f}(0)=(t+1)^{2}+t(t+1)+t(t+1)+t(t+1)+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t}{2}+\binom{t}{2}$
$=t^{2}+2 t+1+3 t(t+1)+2 \frac{(t+1)(t+1)-1}{2}+2 \frac{t(t-1)}{2}$
$=t^{2}+2 t+1+3 t^{2}+3 t+2 \frac{\left(t^{2}+t\right)}{2}+2 \frac{\left(t^{2}-t\right)}{2}$
$=6 t^{2}+5 t+1$.
and also $e_{f}(1)=t(t+1)+t^{2}=2 t^{2}+t$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+5 t+1\right)-\left(2 t^{2}+t\right)=4 t^{2}+4 t+1>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $B: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t$.
Now we find $e_{f}(0)=t(t+1)+(t+1)^{2}+t(t+1)+t^{2}+\binom{t+1}{2}+\binom{t}{2}+\binom{t+1}{2}+\binom{t}{2}$
$=2 t(t+1)+(t+1)^{2}+t^{2}+2\binom{t+1}{2}+2\binom{t}{2}$
$=2 t^{2}+2 t+t^{2}+2 t+1+t^{2}+2 \frac{(t+1)(t+1)-1}{2}+2 \frac{t(t-1)}{2}$
$=4 t^{2}+4 t+1+2 \frac{\left(t^{2}+t\right)}{2}+2 \frac{\left(t^{2}-t\right)}{2}$
$=6 t^{2}+4 t+1$.
and also $e_{f}(1)=t(t+1)+t(t+1)=2 t^{2}+2 t$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+4 t+1\right)-\left(2 t^{2}+2 t\right)=4 t^{2}+2 t+1>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $C: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t, v_{f}(4)=t+1$.
Now we find $e_{f}(0)=t(t+1)+t(t+1)+(t+1)^{2}+t(t+1)+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t}{2}+\binom{t}{2}$
$=3 t(t+1)+(t+1)^{2}+2\binom{t+1}{2}+2\binom{t}{2}$
$=3 t^{2}+3 t+t^{2}+2 t+1+2 \frac{(t+1)(t+1)-1}{2}+2 \frac{t(t-1)}{2}$
$=4 t^{2}+5 t+1+2 \frac{\left(t^{2}+t\right)}{2}+2 \frac{t^{2}-t}{2}$
$=6 t^{2}+5 t+1$.
and also $e_{f}(1)=t^{2}+t(t+1)=2 t^{2}+t$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+5 t+1\right)-\left(2 t^{2}+t\right)=4 t^{2}+4 t+1>1$ for any positive integer
$t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.
Type $D: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t+1, v_{f}(4)=t$.
Now we find $e_{f}(0)=t(t+1)+t(t+1)+t^{2}+t(t+1)+\binom{t}{2}+\binom{t}{2}+\binom{t+1}{2}+\binom{t+1}{2}$
$=3 t(t+1)+t^{2}+2\binom{t}{2}+2\binom{t+1}{2}$
$=3 t^{2}+3 t+t^{2}+2 \frac{t(t-1)}{2}+2 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+3 t+2 \frac{\left(t^{2}-t\right)}{2}+2 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+3 t$.
and also $e_{f}(1)=(t+1)^{2}+t(t+1)=t^{2}+2 t+1+t^{2}+t=2 t^{2}+3 t+1$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+3 t\right)-\left(2 t^{2}+3 t+1\right)=4 t^{2}-1>1$ for any positive integer $t$.
Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.
Type $E: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t+1$.
Now we find $e_{f}(0)=t(t+1)+t^{2}+t(t+1)+(t+1)^{2}+\binom{t}{2}+\binom{t}{2}+\binom{t+1}{2}+\binom{t+1}{2}$
$=2 t(t+1)+t^{2}+(t+1)^{2}+2\binom{t}{2}+2\binom{t+1}{2}$
$=2 t^{2}+2 t+t^{2}+t^{2}+2 t+1+2 \frac{t(t-1)}{2}+2 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+4 t+1+2 \frac{\left(t^{2}-t\right)}{2}+2 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+4 t+1$.
and also $e_{f}(1)=t(t+1)+t(t+1)=2 t(t+1)=2 t^{2}+2 t$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+4 t+1\right)-\left(2 t^{2}+2 t\right)=4 t^{2}+2 t+1>1$ for any positive integer
$t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.
Type $F: v_{f}(1)=t, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t+1$.
Now we find $e_{f}(0)=t^{2}+t(t+1)+t(t+1)+t(t+1)+\binom{t}{2}+\binom{t}{2}+\binom{t+1}{2}+\binom{t+1}{2}$
$=t^{2}+3 t(t+1)+2\binom{t}{2}+2\binom{t+1}{2}$
$=4 t^{2}+3 t+2 \frac{t(t-1)}{2}+2 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+3 t+2 \frac{\left(t^{2}-t\right)}{2}+2 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+3 t$.
and also $e_{f}(1)=t(t+1)+(t+1)^{2}=t^{2}+t+t^{2}+2 t+1=2 t^{2}+3 t+1$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+3 t\right)-\left(2 t^{2}+3 t+1\right)=4 t^{2}-1>1$ for any positive integer $t$.
Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.
Subcase(iv). $n \equiv 3(\bmod 4)$

Let $n=4 t+3$. In this case any one of the following arises.
Type $A: v_{f}(1)=t+1, v_{f}(2)=t+1, v_{f}(3)=t+1, v_{f}(4)=t$.
Type $B: v_{f}(1)=t+1, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t+1$.
Type $C: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t+1$.
Type $D: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t+1, v_{f}(4)=t+1$.
Type $A: v_{f}(1)=t+1, v_{f}(2)=t+1, v_{f}(3)=t+1, v_{f}(4)=t$.
Now we find $e_{f}(0)=(t+1)^{2}+(t+1)^{2}+t(t+1)+t(t+1)+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t}{2}$
$=2(t+1)^{2}+2 t(t+1)+3\binom{t+1}{2}+\binom{t}{2}$
$=4 t^{2}+6 t+2+\frac{t(t-1)}{2}+3 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+6 t+2+\frac{\left(t^{2}-t\right)}{2}+3 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+7 t+2$.
and also $e_{f}(1)=(t+1)^{2}+t(t+1)=t^{2}+2 t+1+t^{2}+t=2 t^{2}+3 t+1$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+7 t+2\right)-\left(2 t^{2}+3 t+1\right)=4 t^{2}+4 t+1>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $B: v_{f}(1)=t+1, v_{f}(2)=t+1, v_{f}(3)=t, v_{f}(4)=t+1$.
Now we find $e_{f}(0)=t(t+1)+(t+1)^{2}+(t+1)^{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t}{2}+t(t+1)$
$=2(t+1)^{2}+2 t(t+1)+3\binom{t+1}{2}+\binom{t}{2}$
$=4 t^{2}+6 t+2+\frac{t(t-1)}{2}+3 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+6 t+2+\frac{\left(t^{2}-t\right)}{2}+3 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+7 t+2$.
and also $e_{f}(1)=t(t+1)+(t+1)^{2}=t^{2}+t+t^{2}+2 t+1=2 t^{2}+3 t+1$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+7 t+2\right)-\left(2 t^{2}+3 t+1\right)=4 t^{2}+4 t+1>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $C: v_{f}(1)=t+1, v_{f}(2)=t, v_{f}(3)=t+1, v_{f}(4)=t+1$.
Now we find $e_{f}(0)=(t+1)^{2}+t(t+1)+(t+1)^{2}+(t+1)^{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t}{2}$
$=3(t+1)^{2}+t(t+1)+3\binom{(t+1}{2}+\binom{t}{2}$
$=4 t^{2}+7 t+3+\frac{t(t-1)}{2}+3 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+7 t+3+\frac{\left(t^{2}-t\right)}{2}+3 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+8 t+3$.
and also $e_{f}(1)=t(t+1)+t(t+1)=2 t^{2}+2 t$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+8 t+3\right)-\left(2 t^{2}+2 t\right)=4 t^{2}+6 t+3>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Type $D: v_{f}(1)=t, v_{f}(2)=t+1, v_{f}(3)=t+1, v_{f}(4)=t+1$.
Now we find $e_{f}(0)=t(t+1)+t(t+1)+t(t+1)+(t+1)^{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t+1}{2}+\binom{t}{2}$
$=3 t(t+1)+(t+1)^{2}+3\binom{t+1}{2}+\binom{t}{2}$
$=3 t^{2}+3 t+t^{2}+2 t+1+\frac{t(t-1)}{2}+3 \frac{(t+1)(t+1)-1}{2}$
$=4 t^{2}+5 t+1+\frac{\left(t^{2}-t\right)}{2}+3 \frac{\left(t^{2}+t\right)}{2}$
$=6 t^{2}+6 t+1$.
and also $e_{f}(1)=(t+1)^{2}+(t+1)^{2}=2 t^{2}+4 t+2$.
We get $e_{f}(0)-e_{f}(1)=\left(6 t^{2}+6 t+1\right)-\left(2 t^{2}+4 t+2\right)=4 t^{2}+2 t-1>1$ for any positive integer $t$. Therefore $\left|e_{f}(0)-e_{f}(1)\right|>1$. which is a contradiction.

Hence the complete graph $K_{n}$ is not 4-remainder cordial for $n>3$.
Next is the Path.
Theorem 5. Any path $P_{n}$ is 4 -remainder cordial.
Proof. Let $P_{n}$ be a path $u_{1} u_{2} \ldots u_{n}$. We now divide the proof into the following four cases.
Case(i). $n \equiv 0(\bmod 4)$
Assign the labels $1,2,3,4$ respectively to the vertices $u_{1}, u_{2}, u_{3}$, and $u_{4}$. Now we consider the next four vertices $u_{5}, u_{6}, u_{7}$, and $u_{8}$. Assign the labels $1,2,3,4$ to the vertices $u_{5}, u_{6}, u_{7}, u_{8}$. The same pattern is continued for the next four vertices. Proceeding like this assign the labels, until we reach the last vertex $u_{n}$. Note that in this process the last four vertices namely $u_{n-3}, u_{n-2}, u_{n-1}$, and $u_{n}$ received the labels $1,2,3$, and 4 .
Case(ii). $n \equiv 1(\bmod 4)$
As in the case(i), assign the labels to the vertices $u_{1}, u_{2}, \ldots u_{n-1}$. Next assign the label 1 to the vertex $u_{n}$.
Case(iii). $n \equiv 2(\bmod 4)$
Assign the labels to the vertices $u_{i},(1 \leq i \leq n-1)$, as in the case(ii). Finally assign the label 2 to the vertex $u_{n}$.
Case(iv). $n \equiv 3(\bmod 4)$
In this case assign the labels to the vertices $u_{i},(1 \leq i \leq n-1)$, as in the case(iii). Finally assign the label 3 to the vertex $u_{n}$. The Table 1, establish that this labeling $f$ is a $4-$ remainder cordial labeling.

Table 1: Edge condition of 4-remainder cordial labeling of a path

| Nature of $n \equiv r(\bmod 4)$ | $e_{f}(0)$ | $e_{f}(1)$ |
| :---: | :---: | :---: |
| $n \equiv 0,2(\bmod 4)$ | $\frac{n-2}{2}$ | $\frac{n}{2}$ |
| $n \equiv 1(\bmod 4)$ | $\frac{n-1}{2}$ | $\frac{n-1}{2}$ |
| $n \equiv 2(\bmod 4)$ | $\frac{n}{2}$ | $\frac{n-2}{2}$ |
| $n \equiv 3(\bmod 4)$ | $\frac{n-1}{2}$ | $\frac{n-1}{2}$ |

Next investigation is the cycle graph.
Theorem 6. All cycles $C_{n}$ is 4-remainder cordial.
Proof. Let $C_{n}=u_{1} u_{2} \ldots u_{n}$ be a cycle.
Case(i). $n \equiv 0(\bmod 4)$

Fix the labels 1, 2, 3, 4 respectively to the four consecutive vertices $u_{1}, u_{2}, u_{3}$, and $u_{4}$. Next assign the labels $4,3,2,1$ respectively to the vertices $u_{5}, u_{6}, u_{7}$, and $u_{8}$. Next assign the labels $4,3,2,1$ to the vertices $u_{9}, u_{10}, u_{11}, u_{12}$. In this manner assign the labels, until we reach the last vertex $u_{n}$. It is easy to verify that the last four vertices $u_{n-3}, u_{n-2}, u_{n-1}$, and $u_{n}$ received the labels $4,3,2,1$.
Case(ii). $n \equiv 1(\bmod 4)$
As in the case(i), assign the labels to the vertices $u_{1}, u_{2}, \ldots u_{n-1}$. Next assign the label 4 to the vertex $u_{n}$.
Case(iii). $n \equiv 2(\bmod 4)$
Assign the labels to the vertices $u_{1}, u_{2}, \ldots u_{n-1}$,as in the case(ii). Finally assign the label 3 to the vertex $u_{n}$.
Case(iv). $n \equiv 3(\bmod 4)$
In this case assign the labels to the vertices $u_{1}, u_{2}, \ldots u_{n-1}$, as in the case(iii). Finally assign the label 2 to the vertex $u_{n}$. The Table 2, establish that this labeling $f$ is a $4-$ remainder cordial labeling.

Table 2: Edge condition for 4- remainder cordial labeling of a cycle

| Nature of $n \equiv r(\bmod 4)$ | $e_{f}(0)$ | $e_{f}(1)$ |
| :---: | :---: | :---: |
| $n \equiv 0,2(\bmod 4)$ | $\frac{n}{2}$ | $\frac{n}{2}$ |
| $n \equiv 1(\bmod 4)$ | $\frac{n+1}{2}$ | $\frac{n-1}{2}$ |
| $n \equiv 3(\bmod 4)$ | $\frac{n-1}{2}$ | $\frac{n+1}{2}$ |

Next we investigate any comb is 4 -remainder cordial.
Theorem 7. Any comb $P_{n} \odot K_{1}$ is 4 -remainder cordial.
Proof. Let $P_{n}=u_{1} u_{2} \ldots u_{n}$ be a Path. Let $v_{i}$ be the pendant vertices attached to $u_{i}, 1 \leq i \leq n$. Assign the labels to the vertices $u_{1}, u_{2}, \ldots u_{n}$ as in theorem 6.

Case(i). $n \equiv 0(\bmod 4)$
We now consider the pendant vertices, fix the labels $4,3,2,1$ respectively to the vertices $v_{1}, v_{2}, v_{3}$, and $v_{4}$. Next assign the labels $1,2,3,4$ to the four vertices $v_{5}, v_{6}, v_{7}$, and $v_{8}$. In similar fashion assign the labels $1,2,3,4$ respectively to the next four consecutive vertices $v_{9}, v_{10}, v_{11}, v_{12}$. Proceed as above and labels the next four vertices and so on. In this the last four vertices $v_{n-3}, v_{n-2}, v_{n-1}, v_{n}$ received the labels $1,2,3,4$.
Case(ii). $n \equiv 1(\bmod 4)$
As in the case(i), assign the labels to the pendant vertices $v_{1}, v_{2}, \ldots v_{n-1}$. Next assign the label 1 to the vertex $v_{n}$.
Case(iii). $n \equiv 2(\bmod 4)$
Assign the labels to the vertices $v_{1}, v_{2}, \ldots v_{n-1}$, as in the case(ii). Finally assign the label 2 to the vertex $v_{n}$.
Case(iv). $n \equiv 3(\bmod 4)$

In this case assign the labels to the vertices $v_{1}, v_{2}, \ldots v_{n-1}$, as in the case(iii). Finally assign the label 3 to the vertex $v_{n}$. The Table 3, establish that this labeling $f$ is a 4 - remainder cordial labeling.

Table 3: Edge condition for 4- remainder cordial labeling of a comb

| Nature of $n \equiv r(\bmod 4)$ | $e_{f}(0)$ | $e_{f}(1)$ |
| :---: | :---: | :---: |
| $n \equiv 0,2(\bmod 4)$ | $\frac{n-2}{2}$ | $\frac{n}{2}$ |
| $n \equiv 1,3(\bmod 4)$ | $\frac{n+1}{2}$ | $\frac{n-3}{2}$ |

4-remainder cordial labeling of $P_{5} \odot K_{1}$ is given in Figure 1.

Figure 1:
Next is the Crown $C_{n} \odot K_{1}$.
Theorem 8. All crowns are 4-remainder cordial.
Proof. The crown $C_{n} \odot K_{1}$ is obtained from the comb $P_{n} \odot K_{1}$, and by adding the edge $u_{n} u_{1}$.
Case(i). $n \equiv 0,2(\bmod 4)$
The vertex labeling as in theorem 7, is also a 4-remainder cordial labeling of crown.
Case(ii). $n \equiv 1,3(\bmod 4)$
Assign the labels 2,3 to the vertices $u_{1}, u_{2}$ respectively and assign the labels 2,3 to the next two vertices $u_{3}, u_{4}$. Continuing in this way until we reach the vertex $u_{n-1}$. That is assign the labels $2,3,2,3, \ldots 2,3$ to the vertices $u_{1}, u_{2}, \ldots, u_{n-1}$. Now assign the label 2 to the last vertex $u_{n}$. Next we consider the pendant vertices, assign the labels to the vertices $v_{1}, v_{2}, \ldots v_{n-1}$ in the pattern $1,4,1,4, \ldots 1,4$. Finally assign the label 4 to the vertex $v_{n}$. The following table 4 , shows that this labeling $f$ is a 4 - remainder cordial labeling.

Table 4: Edge condition for 4- remainder cordial labeling of crown

| Nature of $n$ | $e_{f}(0)$ | $e_{f}(1)$ |
| :---: | :---: | :---: |
| $n$ is even | $\frac{n}{2}$ | $\frac{n}{2}$ |
| $n$ is odd | $\frac{n+1}{2}$ | $\frac{n-1}{2}$ |

Theorem 9. All stars are 4-remainder cordial.
Proof. Let $K_{1, n}$ be the star with $V\left(K_{1, n}\right)=\left\{u, u_{i}: 1 \leq i \leq n\right\}$ and $E\left(K_{1, n}\right)=\left\{u u_{i}: 1 \leq\right.$ $i \leq n\}$. we now give a 4 -remainder cordial labeling to the star $K_{1, n}$. Assign the label 3 to the center vertex $u$.

Case(i). $n \equiv 0(\bmod 4)$
let $n=4 t$ Assign the label 1 to the pendant vertices $u_{1}, u_{2}, \ldots, u_{t}$. Next assign the label 2 to the pendant vertices $u_{t+1}, u_{t+2}, \ldots, u_{2 t}$. We now assign the label 3 to the next $t$-pendant vertices $u_{2 t+1}, u_{2 t+2}, \ldots, u_{3 t}$. Finally assign the label 4 to the remaining pendant vertices.
Case(ii). $n \equiv 1(\bmod 4)$
As in case(i), assign the label to the vertices $u, u_{i}(1 \leq i \leq n-1)$. Next assign the label 1 to the last vertex $u_{n}$.
Case(iii). $n \equiv 2(\bmod 4)$
Assign the label to the vertices $u, u_{i}(1 \leq i \leq n-1)$ as in case(ii). Next assign the label 2 to the vertex $u_{n}$.
Case(iv). $n \equiv 3(\bmod 4)$
As in the case(iii), assign the label to the vertices $u, u_{i}(1 \leq i \leq n-1)$. Next assign the label 4 to the vertex $u_{n}$. Obviously this vertex labeling $f$ is $4-$ remainder cordial labeling.

Theorem 10. The bistar $B_{n, n}$ are 4 -remainder cordial for all $n$.
Proof. Let $B_{n, n}$ be the bistar with $V\left(B_{n, n}\right)=\left\{u, v, u_{i}, v_{i}: 1 \leq i \leq n\right\}$ and $E\left(B_{n, n}\right)=$ $\left\{u v, u u_{i}, v v_{i}: 1 \leq i \leq n\right\}$. Clearly $B_{n, n}$ has $2 n+2$ vertices and $2 n+1$ edges. Assign the label 1,3 respectively to the central vertices $u$ and $v$. Consider the pendant vertices $u_{i}$. Case(i). $n \equiv o(\bmod 4)$
Let $n=4 t$. Assign the label 1 to the pendant vertices $u_{1}, u_{2}, \ldots, u_{2 t}$ and assign the label 3 to the vertices $u_{2 t+1}, u_{2 t+2}, \ldots, u_{4 t}$. Next we move to the other side pendant vertices $v_{i}$. Assign the label 2 to the vertices $v_{1}, v_{2}, \ldots, v_{2 t}$ and assign the label 4 to the remaining pendant vertices $v_{2 t+1}, v_{2 t+2}, \ldots, v_{4 t}$.
Case(ii). $n \equiv 1(\bmod 4)$
Let $n=4 t+1$. Assign the labels to the vertices $u, v, u_{i}, v_{i}(1 \leq i \leq n)$, as in the case(i).
Next assign the label 4,2 respectively to the vertices $u_{i}$ and $v_{i}$.
Case(iii). $n \equiv 2(\bmod 4)$
As in the case(ii), assign the label to the vertices $u, v, u_{i}, v_{i}(1 \leq i \leq n-1)$. Next assign labels 1,4 to the vertices $u_{n}$ and $v_{n}$ respectively.

Case(iv). $n \equiv 3(\bmod 4)$
Assign the labels to the vertices $u, v, u_{i}, v_{i}(1 \leq i \leq n-1)$ in case(iii). Finally assign the labels 3,2 to the remaining vertices. This vertex labeling is a 4 -remainder cordial labeling follows from table 5 .

Table 5: Edge condition of 4-remainder cordial labeling of bistar

| Nature of $n$ | $e_{f}(0)$ | $e_{f}(1)$ |
| :---: | :---: | :---: |
| $n \equiv 0,2(\bmod 4)$ | $\frac{n}{2}$ | $\frac{n-2}{2}$ |
| $n \equiv 1,3(\bmod 4)$ | $\frac{n}{2}$ | $\frac{n-2}{2}$ |

For illustration, a 4-remainder cordial labeling of $B_{5,5}$ is shown in Figure 2.

Figure 2:

Theorem 11. The subdivision of the star $S\left(K_{1, n}\right)$ are 4 -remainder cordial.
Proof. Let $V\left(S\left(K_{1, n}\right)\right)=\left\{u, u_{i}, v_{i}: 1 \leq i \leq n\right\}$ and $E\left(S\left(K_{1, n}\right)\right)=\left\{u u_{i}, u_{i} v_{i}: 1 \leq i \leq n\right\}$. The proof is divided in to four cases given below.
Case(i). $n \equiv 0(\bmod 4)$
let $n=4 t$. Assign the label 3 to the vertex $u$. Next we consider the vertices of degree 2. Assign the label 3 to the vertices $u_{1}, u_{2}, \ldots, u_{2 t}$ and assign the label 2 to the vertices $u_{2 t+1}, u_{2 t+2}, \ldots, u_{4 t}$. Next we move to the pendant vertices. Assign the label 4 to the vertices $v_{1}, v_{2}, \ldots, v_{2 t}$ and assign the label 1 to the vertices $v_{2 t+1}, v_{2 t+2}, \ldots, v_{4 t}$.
Case(ii). $n \equiv 1(\bmod 4)$
Assign the labels to the vertices $u, u_{i}, v_{i}(1 \leq i \leq n-1)$ as in case(i). Next assign the labels 2,1 respectively to the vertex $u_{n}$ and $v_{n}$.
Case(iii). $n \equiv 2(\bmod 4)$
As in case(ii), assign to labels to the vertices $u, u_{i}, v_{i}(1 \leq i \leq n-1)$. Finally assign the labels 4,3 to the vertices $u_{n}$ and $v_{n}$ respectively.
Case(iv). $n \equiv 3(\bmod 4)$
Assign the labels to the vertices $u, u_{i}, v_{i}(1 \leq i \leq n-1)$ as in case(iii). Next assign the labels 2,1 respectively to the remaining vertices $u_{n}$ and $v_{n}$. The table 6 , establish that this vertex labeling $f$ is a 4 -remainder cordial labeling.

Table 6: Edge condition of 4-remainder cordial labeling of subdivision of star

| Nature of $n$ | $e_{f}(0)$ | $e_{f}(1)$ |
| :---: | :---: | :---: |
| $n \equiv 0,2(\bmod 4)$ | $\frac{n}{2}$ | $\frac{n}{2}$ |
| $n \equiv 1,3(\bmod 4)$ | $\frac{n-1}{2}$ | $\frac{n-1}{2}$ |
